DESIGN SKILLS

User Research

Wireframing

Prototyping

Usability Testing

Information Architecture

Brand & Visual Identity

TOOLS

Figma, Procreate

Squarespace, GoDaddy Builder

Donorbox, Microsoft Office

TECHNICAL SKILLS

HTML, CSS, Bootstrap

AWS, API Integration

VS Code, Xcode

WORKING METHOD

Agile/Scrum

Stakeholder Interviews

Design Critique

Iterative Design

EDUCATION

Google UX Design Certificate

Coursera, 2022

UI/UX Bootcamp

Columbia Engineering, 2023

B.B.A., Computer Info Systems and
Mathematics

Zicklin School of Business, Baruch College
(CUNY), 2019

SUMMARY

UI/UX designer who makes the call when a client's instinct and a user's needs disagree, then builds what it takes to ship it.

EXPERIENCE

UI/UX Designer (Freelance)

Mar 2022 – Dec 2024

Albertina's Angels, Nonprofit

- Built a nonprofit's brand identity and full site from zero name recognition to a live donation platform that has raised \$11,304.70 to date across an estimated 375+ individual gifts, averaging roughly \$30 each.
- Migrated the donation flow from Squarespace's native tool to Donorbox for greater donor-data control, then fixed the resulting embed and responsiveness issues myself with custom CSS and iframe adjustments rather than waiting on a developer.
- Designed a bilingual English/Spanish site structure after the founders rejected Squarespace's auto-translate as too literal, then built custom logic to serve their own hand-translated Spanish copy.
- Created the full visual identity, including a logo rooted in a specific family memory, balancing a personal brand mandate with the need to read as credible to donors who would never hear that story firsthand.

UI/UX Designer (Freelance)

Feb 2025 – Apr 2025

Connett Family Counseling

- Took a solo therapist from zero online presence to a live four-page site, overriding the client's instinct to lead with a services list in favor of trust and tone first, keeping services one click away for visitors who were ready for it.
- Ran weekly stakeholder discovery calls in place of formal user research, since none existed pre-launch, translating the client's read on her patients into an information architecture with one clear action per page.
- Designed and built the site directly in GoDaddy's builder, iterating live on calls. It remains the practice's primary online presence today.

UI/UX Designer & Front-End Developer

Feb 2020 – Mar 2020

Intrigue Core

- Redesigned a security dashboard's layout so non-technical stakeholders could scan vulnerability data at a glance, then built the Google Charts visualizations to support it.
- Automated data refresh via API integration, removing a manual update step for the security team.

Cybersecurity UI/UX & Technical Intern

Jul 2019 – Dec 2019

Cimpress / Vistaprint, Waltham, MA

- Replaced a dense legal policy document with a guided decision-tree assistant, designed around how employees actually searched for answers rather than the document's original structure.
- Built a static AWS reporting page giving the security team an at-a-glance view of monthly LastPass, DUO, and CrowdStrike usage.
- Connected LogicGate and RiskLens via API integration and automated monthly financial report pulls with custom scripts, cutting manual data work.
