DESIGN SKILLS

User Research, Wireframing,
Prototyping, Usability Testing,
Information Architecture

TOOLS

Figma, Procreate, Microsoft Office

TECHNICAL SKILLS

HTML, CSS, Bootstrap, AWS, API
Integration, VS Code, Xcode

WORKING METHOD

Agile/Scrum, Stakeholder
Interviews, Design Critique,
Iterative Design

EDUCATION

B.B.A., Computer Info Systems and
Mathematics
Zicklin School of Business, Baruch
College (CUNY), 2019

Google UX Design Certificate,
Coursera, 2022

UI/UX Bootcamp, Columbia
Engineering, 2023

SUMMARY

UI/UX designer with a developer's instinct for how things are built, able to find the clean, usable line through dense technical complexity.

EXPERIENCE

UI/UX Designer (Freelance)

Feb 2025 - Apr 2025

Independent Client, Mental Health Therapist

- Owned the design and build of a private-practice therapist's landing page end to end, from her patients' priorities to a live, deployed site.
- Structured the information hierarchy and wireframes around what prospective patients needed to know first, validated through direct client interviews.
- Iterated the booking flow across multiple feedback rounds, then built and launched the final design myself.

UI/UX Designer (Freelance)

Mar 2022 - Dec 2024

Albertina's Angels, Nonprofit

- Took a nonprofit fundraising site from concept to launch and through several feature rounds, supporting a program sending children in Los Ciruelitos, Dominican Republic to school.
- Interviewed the founders on donor motivations to ground wireframes in what actually drives giving, then tested and refined layout and navigation with stakeholders.
- Designed the logo and full visual identity, then carried it through to a finished, deployed site.

UI/UX Designer and Front-End Developer

Feb 2020 - Mar 2020

Intrigue Core

- Redesigned a security dashboard's layout so non-technical stakeholders could scan vulnerability data at a glance.
- Built Google Charts visualizations that balanced data density with clarity for non-technical viewers.
- Automated data refresh via API integration, eliminating manual updates.

Cybersecurity UI/UX and Technical Intern

Jul 2019 - Dec 2019

Cimpress / Vistaprint, Waltham, MA

- Replaced a dense legal policy document with a guided, decision-tree assistant based on how employees actually searched for answers.
- Built a static AWS reporting page giving the security team an at-a-glance view of monthly LastPass, DUO, and CrowdStrike usage.
- Connected LogicGate and RiskLens through an API integration, automating data handoff between systems.
- Automated monthly financial report pulls with custom scripts, cutting manual data work.
